

Station Prints

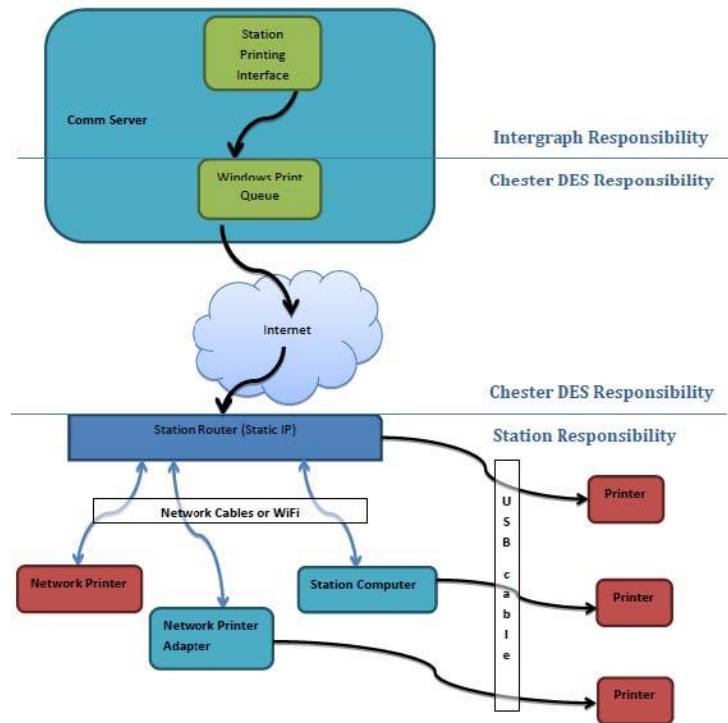

Many agencies utilize station printers or interfaces to receive dispatch reports or incident close reports. The way these reports are delivered will change with the implementation of the Intergraph CAD system. These changes will improve functionality and will make the message delivery faster and more reliable.

As a reminder, each agency requiring station prints sent directly to a printer (not using any 3rd party software) from the new Intergraph CAD system will need to provide DES with a static IP address and port (consult your Internet Service Provider for this information) or the printer's email address (for email-enabled printers) in which to send the prints for your agency. Agencies will also need to provide the make and model of the printer.

Agencies that will use Fire Department Computerized Management Solutions' (FDCMS) ADI product will still have the option to do so. Agencies with service agreements will be assigned a unique URL by FDCMS (xxxxxxx.FDCMSDNS.com) for this purpose. Agencies should contact FDCMS for further information on this feature. Chester County will only require the unique URL of the station to provide prints; a static IP address will not be required. The use of other third party applications (IAmResponding, Active911, ect) will be addressed on a case by case basis.

If your Agency has not submitted your IP printer information or FDCMS URL, please do so ASAP (Email information to cadupdate@chesco.org).

Below is a diagram that depicts the station printing process and responsibility:

****Examples of the prints that are available are presented on the following pages to illustrate the format.****
